## DETAILED ACTION

### *Claim Objections*

1. Claims 1-4, 8 and 9 objected to because of the following informalities:
  - a. Regarding claim 1, the phrase "A frequency for analyzing" is suggested to be changed to "A frequency analyzer for analyzing".
  - b. Regarding claims 2, 3, and 9, the phrase "frequency synthesizer" is suggested to be changed to "frequency analyzer".
  - c. Regarding claim 4, the phrase "each of said" is suggested to be deleted.
  - d. Regarding claim 8, the phrase, "A frequency synthesizer for synthesizing...the frequency synthesizer comprising" is suggested to be changed to "A frequency analyzer for analyzing...the frequency analyzer comprising."
  - e. Regarding claims 1 and 8, the word "synthesize" is suggested to be changed to "analyze".

Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 2634

3. Claims 1-5 and 7-9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 1 and 8 recite the limitation "said frequency analyzer configured to synthesize said plurality of input signals...and provide a single output signal  $x_r$ ". However, after reviewing the specification and drawings (Fig. 5B), there is no description of the frequency analyzer producing a single output signal  $x_r$ . The illustration of Fig. 5B shows a plurality of output signals produced by the frequency analyzer corresponding to the plurality of input signals. The specification does not mention producing single output signal  $x_r$ .

Claim 4 recites the limitation "A polyphase filter comprising:... a complex modulator, which modulates each input signal". However, after reviewing the specification and the drawings (Fig. 5B), it is the understanding of the examiner that the complex modulator which modulates each input signal is not implemented into the polyphase filter (see Fig. 5B). Rather, the modulator is a separate and distinct device located before the polyphase filter in the apparatus.
